Maxim Tishchenko

Senior Product Engineer | AI-Augmented Software Systems

Remote | qwertmax@gmail.com | +7 913 141 01 54
LinkedIn | GitHub

Professional Summary

Senior Product Engineer with 18+ years of experience building high-load distributed systems (50K+ RPS). Scaled startups from zero to exit (DMV.com sold) and to EUR 20M+ in funding (YGO). Specialization: Go, distributed systems, SRE, AI-augmented development.

Core Competencies

Domain	Details
Languages	Go (14 years), Python (10 years), SQL, C/C++, JavaScript, PHP, Bash
AI & ML	Claude Code, MCP Servers, Agentic Workflows, Context Engineering, TensorFlow, Scikit-Learn
Infrastructure & SRE	10 years SRE, High-Availability Systems (50,000+ RPS), Incident Management, SLO/SLI Design, Capacity Planning
DevOps	15 years, CI/CD Pipelines, Infrastructure as Code, GitOps, Containerization, Orchestration
Cloud & Platforms	AWS, GCP, Azure, Kubernetes, Docker, Terraform, CloudFormation, Serverless
Architecture	Distributed Systems, Microservices, Event-Driven Architecture, DDD, Multi-Cloud Strategies
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB, ClickHouse, Redis
Data	Data Pipelines, ETL/ELT, Stream Processing, Data Warehousing
Leadership	Up to 20 engineers across 5 teams, hiring, mentoring, technical strategy

---

Professional Experience

Senior Product Engineer — YGO GMBH (ygo.ai) | March 2024 — Present

Joined at the active growth stage to spearhead the technical vision and hands-on engineering for a travel-tech platform, operating as a key engineering leader responsible for architecture, infrastructure, and product delivery.

AI-Augmented Development & Engineering Leadership

- Pioneered the adoption of agentic AI-driven development workflows across the engineering organization, establishing Claude Code and MCP-based toolchains that reduced development cycle times by up to 50%
- Designed and implemented strategic CLAUDE.md context management frameworks, enabling consistent architectural decisions and automated code quality enforcement across the team
- Built automated verification loops integrating AI agents into CI/CD pipelines, automating code review and regression checks

Business Impact & Growth

- Delivered the technical foundation that supported EUR 20M+ investment round and positioned the platform for the next funding stage
- Architected and delivered the technical platform that won enterprise contracts with Condor Holidays and TUI — two of Europe's largest travel operators
- Translated complex travel-industry business requirements into production-grade systems, directly enabling revenue-generating product launches

High-Availability Systems & Infrastructure

- Built high-availability distributed systems from scratch, scaling to 50,000+ requests per second with sub-second latency requirements
- Established SRE practices including SLO/SLI frameworks, on-call processes, incident response playbooks, and capacity planning models
- Automated infrastructure provisioning and deployment pipelines on AWS, achieving consistent zero-downtime releases
- Built and optimized data pipelines for real-time analytics, pricing engines, and reporting systems

Technical Architecture

- Led system design for microservices architecture in Go, ensuring horizontal scalability and fault tolerance at production scale
- Implemented comprehensive observability stack (metrics, logging, tracing) enabling proactive issue detection and rapid root cause analysis

- Designed and maintained PostgreSQL-backed data layer with performance optimization for high-throughput transactional workloads

---

Director of Software Engineering — Iconmobile, Berlin | June 2022 — March 2024

Led multiple cross-functional development teams, owning technical strategy and product delivery for major international enterprise clients.

Schüco DCS SmartTouch & SmartHome

- Led a development team coordinating with two levels of client stakeholders to deliver a door communication and access control system
- Implemented full protocol stack: SIP, WebRTC, WebSocket, video and audio streaming protocols
- Architected management system for multiple embedded devices (doorbells and intercommunication units) with permissions and access control
- End-to-end platform: hardware unit + iOS/Android mobile applications + embedded intercommunication devices

Carmeo — Car Repairs Platform (Bosch)

- Led the development team and collaborated with stakeholders to design and deliver the platform
- Delivered key features: appointment booking, price comparison, quote estimation, knowledge base, and maintenance scheduling

WASTEER — Waste Analytics Platform

- Architected a platform for intuitive analysis and control of waste streams, digitizing industry-specific knowledge
- Integrated process data and sensor technology to generate actionable analytical insights

Carrier — Refrigeration Monitoring Platform

- Designed the architecture for sensor data collection and analysis from refrigeration units
- Built mobile application for real-time equipment status monitoring

---

Software Architect — Iconmobile, Berlin | October 2020 — May 2022

Salonlab for Schwarzkopf (Henkel) — SaaS platform serving 10,000+ salons worldwide

- Architected a Go backend comprising 9 microservices integrated with an IoT device (Smart Analyzer) and iPad application

- Developed mathematical modelling of analytical data from IoT device sensors, converting raw readings into interpretable values
- Implemented 10+ user journey flows during salon visits, each combining different service functionalities
- Built a calibration dashboard for all devices (support tooling for the support department)
- Migrated the project to a monorepo, extracted the core into a monolithic project
- Achieved comprehensive unit and integration test coverage without mocking (real database testing)
- Enhanced authentication system via SAP (GDPR/CCPA-compliant, cross-regional authorization)
- Fully automated pipeline from commit to release

Refrigeration Unit Monitoring (Carrier)

- Predictive maintenance, work scheduling, and real-time system monitoring
- Task distribution among grocery store employees

Software Architect — DeepConvo, Inc (contract) | March 2019 — October 2020

telling.ai — AI-Powered Lung Disease Diagnostics via Voice Analysis

SaaS service built on research from Stanford and Carnegie Mellon University. Analyzes voice and breath sounds using machine learning to identify lung diseases.

- Architected a backend API of 3 microservices: API gateway, user management, data collection
- Implemented raw audio streaming directly from devices to the AI model
- Resolved complex microphone compatibility issues across Safari (iOS) and Chrome (Android)
- Evaluated 10 audio recording libraries, produced comparative analysis, rewrote one to meet project requirements
- Built a test framework achieving 99% code coverage
- Deployed ClickHouse for marketing analytics and complex scientific report generation
- Optimized system performance for users on low-bandwidth connections

---

Software Architect — Burning Buttons (contract) | 2011 — October 2020

DigitalGenius — AI Customer Support Automation Platform
February 2018 — November 2019

- Built infrastructure for an AI high-load application: 5,000+ Lambda functions, 70+ EC2 instances, 18 clusters
- Fully automated pipeline from commit to release

- Every service designed according to microservices principles, CI/CD fully dockerized

DMV.com — Largest Private Automotive Services Portal in the US
2011 — 2018

- Co-founded the project from scratch with the CEO, scaled it from two people to a company of hundreds
- Successfully sold to OnpointGlobal (Miami)
- **Scale:** 42,000 RPS, 1,400 concurrent users per second, 70,000 drivers served daily
- Scraped all DMV offices across the entire country (complex technical challenge)
- Built a marketplace of products, affiliate APIs, Vehicle Registration API, and a Traffic Schools portal
- 19,000 content pages, 50,000 driving records fulfilled, 20,000 questions answered monthly
- Migrated from bare-metal to AWS to handle explosive traffic growth after national TV advertising

DMV WP — Premium Domain Network (cuba.com, atlanta.com, and others)
January 2018 — August 2018

- Managed 600 premium high-traffic domains
- Scale: 100 EC2 instances baseline, up to 300 during peak loads

Mealz — Recipe & Meal Planning Platform

- Designed AWS infrastructure with dev/QA/prod environments
- Built isolated multi-regional tenants for affiliate customers
- CI/CD pipelines based on dockerized microservices, AWS cost optimization

---

Full Stack Developer — Starately LLC | February 2007 — 2011

Perseus IAM — Cloud-Native Identity & Access Management Platform

- IAM platform built on microservices architecture — one of the earliest implementations of this approach
- Deployable in any model: on-premise, cloud, or hybrid
- Real-time data quality assurance for IAM/IGA implementations

GoodDogLabs — Geolocation Messenger

- Twitter-like system with subscription to geo-objects (streets, buildings, neighborhoods)
- Backend built in Go

Browser Fingerprint Identification System

- User identification via browser fingerprint using specialized algorithms
- Ruby + Python

Education

Omsk State Technical University

Master of Computer Science | September 2007 — July 2009
Research: Fault-Tolerant Systems. Areas of study: neural networks, code quality metrics, multithreaded system-level programming.

Bachelor of Computer Science | September 2003 — July 2007

Languages

- **Russian** — Native
- **English** — C2 (Proficient)
